

T502 Emergency Hammer

Use magnet on back to affix tool to a metal surface

To operate light:

Press once for LED flashlight. Press 2nd time for steady-on lantern. Press 3rd time for flashing lantern. Press 4th time to turn off.

To change batteries:

- 1) Remove battery cover.
- 2) Remove depleted batteries and discard properly.
- 3) Insert four new LR41 or equivalent button cell batteries with positive (+) terminal facing the light.
- 4) Replace battery cover.

How to use the safety hammer:

In the event of an emergency, the safety hammer can be used to break a car window to facilitate escape from the vehicle. The safety hammer is located on the end of the tool opposite the LED light. To use, hold the tool in your hand and press the hammer hard to break the corner or edge of window. These are the points where the glass is the weakest.

How to use the seat belt cutter:

The tool also includes a seat belt cutter to facilitate escape from the vehicle. Slide the belt into the slot and cut back and forth along the blade until the belt is cut.
